5. Manage Open Storage area.
6. Manage all type of SKU like as Heavy, palletize and bulky.
7. Relocation and reassign of SKU location.
8. Assign and check actual allocation space of supplier with sub supplier or sub customer.
9. Invoice management and process related document management.
10. Realtime supplier Stock Dashboard for supplier and admin Dashboard.

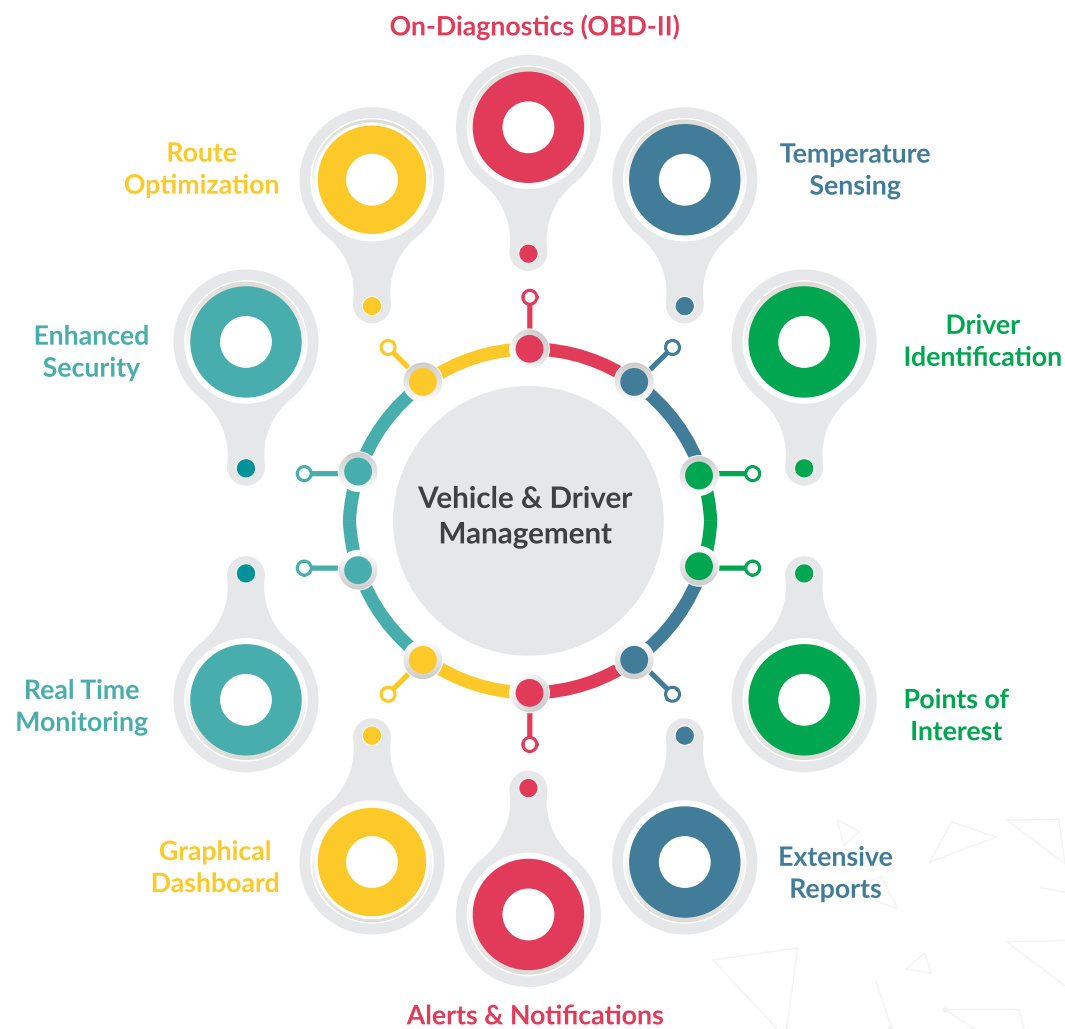

How It Works !

Fleet Management System (FMS)

Improves Vehicle Productivity

- FMS is an administrative approach that allows companies to organize and coordinate work vehicles with the aim to improve efficiency, reduce costs, and provide compliance with government regulations. While most commonly used for vehicle tracking, fleet management includes following and recording mechanical diagnostics and driver behavior.
- FMS allows a company's management and dispatchers to track all vehicles from a central location. Tracking systems are used to monitor driver behavior, proper vehicle use, work breaks and safety. FMS may also include some remote control capabilities to help prevent stolen vehicles and cargo with GPS, mapping and cellular technology to quickly and accurately locate rogue vehicles. Vehicle operation is often monitored for mechanical problems and efficiency, helping the overall efficiency of the company and protecting profitability.
